    A) The system has benefits, so it cannot have drawbacks.
    B) The system is convenient, but we should consider its cost.
    C) Nobody should ask how the system works.

Read the text and answer questions 16 to 20.

CONVENIENCE AND A BACKUP PLAN

Our family installed a smart system that controlled several lights from a phone. It was convenient, especially when we arrived home carrying bags. One evening, the internet connection failed. We discovered that some lights could still be switched on manually, but we did not know how to reset the system. The next day, we read the instructions and kept a short printed guide beside the control panel. We still use the system, but we now check how new devices work without an internet connection. The experience did not make us reject smart technology. It reminded us that understanding a device matters as much as enjoying its useful features.

16. What did the smart system control?
    A) The family car
    B) Every door in the neighbourhood
    C) Several lights

17. What went wrong one evening?
    A) The internet connection failed. B) The family lost all its phones. C) Every light bulb broke.

18. What did the family do the next day?
    A) Removed every light switch
    B) Read the instructions and prepared a printed guide
    C) Stopped using electricity at home

19. What do they check before adding devices now?
    A) Whether they have the brightest screens
    B) How they work without internet access
    C) How many advertisements mention them

20. Which lesson fits the text?
    A) New technology should never be used.
    B) Instructions are needed only by engineers.
    C) Convenience should be supported by understanding and preparation.
