Choose the best answer for each question.

11. The new tool is still being tested, ____ its future impact is uncertain.
    A) although B) unless C) so

12. 'It is unlikely to happen soon.' This means ____.
    A) The speaker guarantees it will happen immediately.
    B) The speaker thinks it probably won't happen soon.
    C) The speaker says it has already happened.

13. Follow the instructions ____ you change the settings.
    A) despite B) before C) during

14. To customise a game is to ____.
    A) change it to suit your preferences
    B) remove every rule from it
    C) copy another player's result

15. Which statement separates a possibility from a proven result?
    A) The device will certainly succeed because its name is new.
    B) The device may help, but the trial has not finished.
    C) The device failed because I haven't tried it.

Read the text and answer questions 16 to 20.

Testing a Future Classroom

A school tested a small classroom robot that could carry equipment between rooms. Before the trial, some students predicted that it would replace classroom assistants. During the trial, however, the robot could not open certain doors and sometimes needed help on crowded corridors. It did save time on a few routine journeys. The project team described these results without claiming that every difficulty had been solved. Next term, they may test an improved version. Whether the school buys one will depend on its usefulness, cost and ability to work reliably in the building.

16. What could the robot do?
    A) Teach every lesson independently
    B) Open all the school's doors
    C) Carry equipment between rooms

17. What did the trial reveal?
    A) The robot needed no human assistance.
    B) The robot was immediately purchased.
    C) The robot had both useful features and limitations.

18. How did the team describe the results?
    A) It acknowledged remaining difficulties.
    B) It guaranteed complete success everywhere.
    C) It avoided mentioning any useful feature.

19. What is uncertain?
    A) Whether an improved version will be tested next term
    B) Whether the first trial took place
    C) Whether the school has classrooms

20. What will influence the purchase decision?
    A) Only the robot's colour
    B) Usefulness, cost and reliability
    C) Only the students' first predictions
